# 25. Introduction to Ratios

Name_____

The Problem: The term ratio, in a very general sense, is a comparison between two sets of things. Think about how it makes sense to you to express the relationship between two quantities by considering the two comparisons below.

Figure 1 A group of students (top row) and robots (bottom row).	Figure 2 A group of tire boxes (top row) and tires (bottom row).

1. Look at each picture and write the ratio it suggests.

Figure 1	Figure 2

2. For each ratio write as many ratios as you can (at least three) that are equivalent to that ratio.

Figure 1	**Figure 2**
